Throughout history, arguments for and against the existence of God have been largely confined to philosophy and theology, while science has sat on the sidelines.

Despite the fact that science has revolutionized every aspect of human life and greatly clarified our understanding of the world, somehow the notion has arisen that it has nothing to say about the possibility of a supreme being, which much of humanity worships as the source of all reality. This book contends that, if God exists, some evidence for this existence should be detectable by scientific means, especially considering the central role that God is alleged to play in the operation of the universe and the lives of humans. Treating the traditional God concept, as conventionally presented in the Judeo-Christian and Islamic traditions, like any other scientific hypothesis, physicist Stenger

examines all of the claims made for God's existence. He considers the latest Intelligent Design arguments as evidence of God's influence in biology. He looks at human behavior for evidence of immaterial souls and the possible effects of prayer. He discusses the findings of physics and astronomy in weighing the suggestions that the universe is the work of a creator and that humans are God's special creation. After evaluating all the scientific evidence, Stenger concludes that beyond a reasonable doubt the universe and life appear exactly as we might expect if there were no God. This paperback edition of the New York Times bestselling hardcover edition contains a new

Examines the proof of the existence of God in the light of contemporary science, and maintains that modern science can serve to demonstrate that God does not exist.

This history of atomism, from Democritus to the recent discovery of the Higgs boson, chronicles one of the most successful scientific hypotheses ever devised. Originating separately in both ancient Greece and India, the concept of the atom persisted for centuries, despite often running afoul of

conventional thinking. Until the twentieth century, no direct evidence for atoms existed.

Today it is possible to actually observe atoms using a scanning tunneling microscope. In this book, physicist Victor J. Stenger makes the case that, in the final analysis, atoms and the void are all that exists. The book begins with the story of the earliest atomists - the ancient Greek philosophers Leucippus, Democritus, and Epicurus, and the Latin poet Lucretius. As the author notes, the idea of elementary particles as the foundation of reality had many opponents throughout history - from Aristotle to Christian theologians and even some nineteenth-century chemists and

philosophers. While theists today accept that the evidence for the atomic theory of matter is overwhelming, they reject the atheistic implications of that theory. In conclusion, the author underscores the main point made throughout this work: the total absence of empirical facts and theoretical arguments to support the existence of any component to reality other than atoms and the void can be taken as proof beyond a reasonable doubt that such a component is nowhere to be found.

Science Shows That the philosophical defence of religious belief, and by careful reasoning casts doubt on the legitimacy of relying on faith instead of evidence, and on probabilistic arguments for the existence of God.

In the past few years a number of scientists have claimed that there is credible scientific evidence for the existence of God. In 1998 Newsweek went so far as to proclaim on its cover, Science Finds God. Is this true? Are scientists close to solving the greatest of all mysteries? Physicist Victor J. Stenger delves into this fascinating question from a skeptical point of view in this lucid and engrossing presentation

of the key scientific facts. Stenger critically reviews the attempts of many contemporary theologians and some scientists to resurrect failed natural theologies in new guises. Whether these involve updated arguments from design, anthropic coincidences, or modern forms of deism, Stenger clearly shows that nothing in modern science requires supernatural explanation. He offers naturalistic explanations for empirical observations that are frequently given theistic interpretations: for example, that information in the universe implies an intelligent designer, that a universe with a beginning requires a Creator, and that the elegant laws of physics suggest a transcendent realm. He shows

that alleged spiritual, nonmaterial phenomena do not lie beyond the experimental reach of physics. This thorough and careful consideration of scientific evidence covers much ground yet remains accessible and highly informative to the educated lay reader. Victor Stenger (Lafayette, CO) is emeritus professor of physics and astronomy at the University of Hawaii and visiting fellow in philosophy at the University of Colorado. He is the author of Timeless Reality, The Unconscious Quantum, Physics and Psychics, and Not by Design.

In recent years a number of bestselling books have forcefully argued that belief in God can no longer be defended on rational or

empirical grounds, and that the scientific worldview has rendered obsolete the traditional beliefs held by Christianity, Judaism, and Islam. The authors of these books—Richard Dawkins, Daniel Dennett, Sam Harris, Christopher Hitchens, and Victor J.

Stenger—have come to be known as the "New Atheists."

Predictably, their works have been controversial and attracted a good deal of critical reaction. In this new book, Victor J. Stenger, whose *God: The Failed Hypothesis* was on the New York Times bestseller list in 2007, reviews and expands upon the principles of New Atheism and answers many of its critics. He demonstrates in detail that naturalism—the view that all of

Science Shows That God and nothing else—is sufficient to explain everything we observe in the universe, from the most distant galaxies to the inner workings of the brain that result in the phenomenon of mind.

Stenger disputes the claim of many critics that the question of whether God exists is beyond the ken of science. On the contrary, he argues that absence of evidence for God is, indeed, evidence of absence when the evidence should be there and is not. Turning from scientific to historical evidence, Stenger then points out the many examples of evil perpetrated in the name of religion. He also notes that the Bible, which is still taken to be divine revelation by millions, fails

as a basis for morality and is unable to account for the problem of unnecessary suffering throughout the world. Finally, he discusses the teachings of ancient nontheist sages such as Buddha, Lao Tzu, and Confucius, whose guidelines for coping with the problems of life and death did not depend upon a supernatural metaphysics. Stenger argues that this "way of nature" is far superior to the traditional supernatural monotheisms, which history shows can lead to a host of evils. The New Atheism is a well-argued defense of the atheist position and a strong rebuttal of its critics.

Christopher Hitchens, described in the London Observer as “one of the most prolific, as well as brilliant, journalists of our time” takes on his biggest subject yet—the increasingly dangerous role of religion in the world. In the tradition of Bertrand Russell’s *Why I Am Not a Christian* and Sam Harris’s recent bestseller, *The End Of Faith*, Christopher Hitchens makes the ultimate case against religion. With a close and erudite reading of the major religious texts, he documents the ways in which religion is a man-made wish, a cause of dangerous sexual repression, and a

distortion of our origins in the cosmos. With eloquent clarity, Hitchens frames the argument for a more secular life based on science and reason, in which hell is replaced by the Hubble Telescope's awesome view of the universe, and Moses and the burning bush give way to the beauty and symmetry of the double helix.

The God Delusion caused a sensation when it was published in 2006. Within weeks it became the most hotly debated topic, with Dawkins himself branded as either saint or sinner for presenting his hard-hitting, impassioned rebuttal of religion of all types. His argument could hardly be more topical. While

Europe is becoming increasingly secularized, the rise of religious fundamentalism, whether in the Middle East or Middle America, is dramatically and dangerously dividing opinion around the world. In America, and elsewhere, a vigorous dispute between 'intelligent design' and Darwinism is seriously undermining and restricting the teaching of science. In many countries religious dogma from medieval times still serves to abuse basic human rights such as women's and gay rights. And all from a belief in a God whose existence lacks evidence of any kind. Dawkins attacks God in all his forms. He eviscerates the major arguments for religion and demonstrates the supreme
