SHORTLISTED FOR A JAMES TAIT BLACK PRIZE 2020WINNER OF A NATIONAL BOOK CRITICS CIRCLE AWARDWRITTEN BY THE RECIPIENT OF A MACARTHUR GENIUS GRANTAt the dawn of the twentieth century, black women in the US were carving out new ways of living. They refused to labour like slaves or to accept degrading conditions of work. Wrestling with the question of freedom, they invented forms of love and solidarity outside convention and law. These were the pioneers of free love, common-law and transient marriages, queer identities, and single motherhood - all deemed scandalous, even pathological, at the dawn of the 20th century, though they set the pattern for the world to come.In Wayward Lives, Beautiful Experiments, Saidiya Hartman deploys both radical scholarship and profound literary intelligence to examine the transformation of intimate life that they instigated. With visionary intensity, she conjures their worlds, their dilemmas, their defiant brilliance.

With iPhone Hacks, you can make your iPhone do all you'd expect of a mobile smartphone -- and more. This cunning little handbook is exactly what you need to make the most of your iPhone.

A World of Insects showcases classic works on insect behavior, physiology, and ecology published over half a century by Harvard University Press authors Costa, Dethier, Eisner, Goff, Heinrich, Hölldobler, Roeder, Ross, Seeley, von Frisch, Waldbauer, Wilson, and Winston.

A history of ancient literary culture told through the quantitative facts of canon, geography, and scale.

The sterile insect technique (SIT) is an environment-friendly method of pest control that integrates well into area-wide integrated pest management (AW-IPM) programmes. This book takes a generic, thematic, comprehensive, and global approach in describing the principles and practice of the SIT. The strengths and weaknesses, and successes and failures, of the SIT are evaluated openly and fairly

from a scientific perspective. The SIT is applicable to some major pests of plant-, animal-, and human-health importance, and criteria are provided to guide in the selection of pests appropriate for the SIT. In the second edition, all aspects of the SIT have been updated and the content considerably expanded. A great variety of subjects is covered, from the history of the SIT to improved prospects for its future application. The major chapters discuss the principles and technical components of applying sterile insects. The four main strategic options in using the SIT — suppression, containment, prevention, and eradication — with examples of each option are described in detail. Other chapters deal with supportive technologies, economic, environmental, and management considerations, and the socio-economic impact of AW-IPM programmes that integrate the SIT. In addition, this second edition includes six new chapters covering the latest developments in the technology: managing pathogens in insect mass-rearing, using symbionts and modern molecular technologies in support of the SIT, applying post-factory nutritional, hormonal, and semiochemical treatments, applying the SIT to eradicate outbreaks of invasive pests, and using the SIT against mosquito vectors of disease. This book will be useful reading for students in animal-, human-, and plant-health courses. The in-depth reviews of all aspects of the SIT and its integration into AW-IPM programmes, complete with extensive lists of scientific references, will be of great value to researchers, teachers, animal-, human-, and plant-health practitioners, and policy makers.

Staphylococcus was first recognized as a human pathogen in 1880 and was named for its grape cluster-like appearance. In 1884, Staphylococcus aureus was identified and named for its vibrant golden color, which was later found to be the result of golden toxin production. Here, experts examine in-depth patterns of S. aureus colonization and exposures in humans, mammals, and birds that have led to the development of various clinical diseases. The mode of transmission of S. aureus and different methods for its detection in different samples are defined. Conventional antibiotic options to treat this aggressive, multifaceted, and readily adaptable pathogen are becoming limited. Alternative, novel chemotherapeutics to target S. aureus are discussed in the pages within, including herbal medicines, bee products, and modes of delivery.

Aquaponics is the integration of aquaculture and soilless culture in a closed production system. This manual details aquaponics for small-scale production--predominantly for home use. It is divided into nine chapters and seven annexes, with each chapter dedicated to an individual module of aquaponics. The target audience for this manual is agriculture extension agents, regional fisheries officers, non-governmental organizations, community organizers, government ministers, companies and singles worldwide. The intention is to bring a general understanding of aquaponics to people who previously may have only known about one aspect.

Insect pests are becoming a problem of ever-more biblical proportions. This new textbook collates a series of selected papers that attempt to address various fundamental components of area-wide insect pest control. Of special interest are the numerous papers on pilot and operational programs that pay special attention to practical problems encountered during program implementation. It ' s a compilation of more than 60 papers authored by experts from more than 30 countries.
