The Vaccine Handbook has a simple purpose- to draw together authoritative information about vaccines into a simple and concise resource that can be used in the office, clinic, and hospital. Not an encyclopedia or scientific textbook, The Vaccine Handbook gives practical advice and provides enough background for the practitioner to understand the recommendations and explain them to his or her patients. For each vaccine, the authors discuss the disease and its epidemiology, the vaccine's efficacy and safety, and the practical questions most frequently asked about the vaccine's use. The authors also discuss problems such as allergies, breastfeeding, dosing intervals and missed vaccines, and immunocompromised individuals. This handbook is also available electronically for handheld computers. See Media listing for details.

In this third edition of Manual of Travel Medicine, Australasian healthcare professionals will continue to find the information and advice they need to care for travellers. The Manual is structured as follows: principles of pre-travel healthcare; immunisation; prevention and management of malaria; prevention and management of travellers' diarrhoea; specific infectious and non-infectious conditions; travellers with specific needs; and health issues in returned travellers. Recommendations for common travel destinations and immunisation and malaria recommendations by country are summarised. For this edition: all original chapters have been reviewed and updated; a chapter, [Health issues in returned travellers], which focuses on the more common and important illnesses and their presentations, has been added; information about and recommendations for the use of new vaccines has been added; 15 of the 21 infection-distribution maps are now printed in full colour; and Mike Starr and Jim Black have joined the author team. For doctors, nurses, and pharmacists, this third edition of the Manual will continue to prove a practical, user-friendly, and authoritative desk-top reference.

Most textbooks on infectious diseases take a disease-specific and/or organ-specific approach. In this book a patient-centred approach is taken. The starting point is the patient's presenting problem and its evolution. The focus is on clinical diagnosis and principles of management. The book comprises six parts. Part I, [General approach to infectious diseases], establishes the patient-centred approach. Part II outlines presenting problems and syndromes, and Part III, infections of organ systems. These two sections highlight day-to-day problems faced by clinicians, differential diagnoses and management. Part IV covers specific infections, chosen for their importance or unique nature, and Part V deals with infectious problems in specific hosts and settings. Part VI outlines the principles of antimicrobial therapy and disease prevention through immunisation. The book concludes with a set of [golden rules of infectious diseases]. This is not a comprehensive infectious diseases textbook; it contains what the editors consider to be core knowledge and skills for the practising clinician. Infectious diseases in adults are the primary focus; paediatric infectious diseases are not covered in any detail. In this third edition All the original chapters have been thoroughly reviewed and updated. Three new chapters have been added: chapter 25, [Herpesvirus infections], chapter 41, [Viral and rickettsial infections of particular relevance to Australia], and chapter 43, [Infectious diseases in the South-East Asia region]. An Australasian character is evident, with the inclusion of five new authors from New Zealand and (where relevant and possible) the inclusion of data from New Zealand. The companion CD that was included in the second edition has not been retained. Senior medical students, graduates, and more experienced clinicians interested in the clinical skills of infectious diseases, will find this book refreshingly straightforward, easy to read, and rich with clinical pearls.

Harvard's Nursing Guide to Drugs 8e is an essential resource for all nursing students and practitioners. The information presented in this user-friendly guide can be accessed either by therapeutic class or by system. Each section is introduced by a clear description, followed by the AIZ of drugs within the given therapeutic class. It includes the action, use and dosage of each drug as well as important nursing points and nursing cautions. This comprehensive guide includes both trade and generic drug names for the reader's ease of use. As with previous editions of Harvard's Nursing Guide to Drugs each drug is independently reviewed with obsolete drugs being removed and new drugs added. Each existing drug is also independently examined so as to ensure that its use, doses, side effects, contraindication and precautions comply with that of the Therapeutic Goods Association (TGA). slotted lift out card contains calculation formulae and selected abbreviations pocket-sized format for greater portability systematic update of all drugs throughout the book available forms will be added to each drug entry new Appendix for Normal Blood Values will be included with the eighth edition

The new edition will provide readily accessible material for public health educators and practitioners, in a number of professions, who are increasingly being required to address the challenges emerging from the inter-related impacts of the social and environmental factors impacting on health in an era of globalisation.

This concise and practical guide describes infections in geographical areas and provides information on disease risk, concomitant infections (such as co-prevalence of HIV and tuberculosis) and emerging bacterial, viral and parasitic infections in a given geographical area of the world. Infectious Diseases: A Geographic Guide is divided according to United Nations world regions and addresses geographic disease profiles, presenting symptoms and incubation periods of infections. Each chapter contains a section on the coverage of the childhood vaccination programs in the countries included in that region. Chapters also include descriptions of infectious disease risk and problems with resistant bacteria in each region (e.g. antibiotic resistance in Salmonella infections in Southeast Asia). For the clinician, this book is a tool to generate differential diagnoses by considering the geographical history, as well the presenting symptoms and duration of illness. For the travel medicine specialist, this book provides information on risks of different diseases at various destinations and is particularly useful in advising long-term travelers.

The book provides a summary of results from the 14th year of the BEACH program, a continuing national study of general practice activity in Australia. From April 2011 to March 2012, 984 general practitioners recorded details about 98,400 GP-patient encounters, at which patients presented 153,218 reasons for encounter and 152,286 problems were managed. For an 'average' 100 problems managed, GPs recorded: 70 medications (including 57 prescribed, six supplied to the patient and seven advised for over-the-counter purchase); 11 procedures; 24 clinical treatments (advice and counselling); six referrals to specialists and three to allied health services; orders for 31 pathology tests and seven imaging tests. A subsample study of more than 31,000 patients suggests prevalence of the following measured risk factors in the attending adult (18 years and over) patient population: obesity - 27%; overweight - 35%; daily smoking - 15%; at-risk alcohol consumption - 25%. One

in four people in the attending population had at least two of these risk factors. A companion publication, A decade of Australian general practice activity 2002-03 to 2011-12 is also available.
