This practical guide by two experienced translators and translation tutors explores aspects of time, context and culture in a range of translated literary texts, including novels, memoirs, poems and plays. Reflective analytical sections are complemented by a variety of practical tasks that reflect the book's craft-based approach. Providing a dual focus on both analysis and creativity, this volume helps readers to develop two different skill sets required for translation: deconstruction and reconstruction. To learn how to analyse or deconstruct a source text (ST), the tasks include translating and editing, comparison and analysis of source language (SL) texts and translations, and

critiquing or improving target language (TL) texts produced by translators from different times. A range of creative writing challenges reveal the secrets writers use to hook their readers. Whatever language readers translate into, these insights will help them to find their own writer's voice, making them better equipped to recreate another author's voice, whatever the time or cultural context. This is the essential guide to improving target texts for all translators and students of translation.

The classic personal account of Watson and

Crick's groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of *A Beautiful Mind*. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.

Corpus-based Approaches to Contrastive Linguistics and Translation Studies presents readers with up-to-date research in corpus-based contrastive linguistics and translation studies, showing the high degree of complementarity between the two fields in terms of research methodology, interests and objectives. Offering theoretical, descriptive and applied perspectives, the articles show how translation and contrastive approaches to grammar, lexis and discourse can be

harmoniously combined through the use of monolingual, bilingual and multilingual corpora and how contrastive information needs to inform translation research and vice versa. The notion of contrastive linguistics adopted here is broad; thus, alongside comparisons of Malay/English idioms and the French imparfait and its English equivalents, there are articles comparing different varieties of French, and sign language with spoken language. This collection should be of interest to researchers in corpus linguistics, contrastive linguistics and translation studies. In addition, the section on corpus-based teaching applications will be of great value to teachers of translation and contrastive linguistics.

Here is the most complete guide available to the isolation, analysis, and synthesis of RNA. It covers everything researchers and laboratory workers need to know about the study of gene expression via RNA analysis- from the theory behind the methods, to actual problem-solving techniques. Step-by-step protocols are presented for each method. A careful presentation of the experimental formalities of these protocols enables specialists and nonspecialists alike to implement the methods easily in the laboratory. Each protocol is accompanied by the theoretical background underlying the experimental procedure and most chapters contain illustrations of typical results and

troubleshooting tips. A Laboratory Guide to RNA offers a straightforward detailed account of experimental procedures, ranging from the isolation of RNA from a variety of cell and tissue types, detection analysis, and quantitation using a range of strategies, to large- and small-scale synthesis of RNA. This unique guide not only covers established procedures such as RNA blotting and nuclease protection, but also the latest protocols for quantitative PCR and differential display. Protocols addressing in situ hybridization are highlighted in an eight-page, full-color section that illustrates the power of the technique for detection of gene expression in tissues and whole organisms. Featuring contributions from leading research laboratories and the biotechnology field, A Laboratory Guide to RNA: Isolation, Analysis, and Synthesis provides all the methods required for RNA analysis. It is the ideal laboratory guide for research scientists, graduate students, and lab personnel who need a solid reference on the analysis of gene expression at the RNA level.

Second edition of this popular self-study guide for students of Russian. This is an expanded and slightly revised version of the book of the same title which caused quite a stir when it was first published (1995). It thus reflects an additional step in an ongoing research project which was launched in the 1970s. The main objective is to transcend the limitations of using descriptive methods as a mere ancillary tool and place a proper branch of DTS at the very heart of the discipline, between the theoretical and the applied branches. Throughout the book, theoretical and methodological discussions are illustrated by an assortment of case studies, the emphasis being on the need to take whatever one wishes to focus on within the contexts which are relevant to it. Part One discusses the pivotal position of the

Get Free Section 85 Translation Study Guide

descriptive branch within Translation Studies, and Part Two then outlines a detailed rationale for that positioning. This, in turn, supplies a framework for the case studies comprising Part Three, where a number of exemplary issues are analysed and contextualized: texts and modes of translational behaviour are situated in their cultural setting, and textual components are related to their texts and then also to the cultural constellations in which they are embedded. All this leads to Part Four, which asks what the knowledge accumulated through descriptive studies of the kind advocated in the book is likely to yield in terms of both the theoretical and the applied branches of the field. All in all: an innovative, thought-provoking book which no one with a keen interest in translation can afford to ignore.
