Joan D. Koss-Chioino and Philip Hefner's new volume is unique in exploring the meaning of spiritual transformation and healing with new research from a scientific perspective. An interdisciplinary group of contributors-anthropological, psychological, medical, theological, and biological scientists-investigate the role of religious communities and healing practitioners, with spiritual transformation as their medium of healing. Individual authors evaluate the meaning of spiritual transformations and the consequences for those who experience it; the contributions of indigenous healing systems; new frameworks for neurological and physiological correlates of transformative religious experiences; the support from neuroscience for the radical empathy and intersubjective exchange that takes place in healing practices; and evidence for universal elements of the healing process. This exciting new book will be an invaluable resource for those generally interested in the role of religion in society, across the sciences, social sciences, and all religious traditions. With a foreword by Solomon H. Katz.

THE HEALING FIELD examines remarkable cases of healing and personal transformation made possible by a range of natural energy based healing techniques. The anomalous experiences arising in these contexts throw fresh light on the timeless issues of the nature of consciousness, reality and selfhood. Through the unique lens of the energy healer we are able to discern a far more expansive, positive and empowering view of our place within the larger web of life. The experiences recorded in The Healing Field are based upon live cases derived from over 15 years of professional experience. The insight and understanding arising from people's lived experience goes far to relieving the anxiety, fear and doubt that otherwise overshadows the vast majority of people. Back Cover Text: The Healing Field presents a collection of real-life cases drawn from intensive energy healing work. For over 15 years, Peter and his wife Gulcan have been practicing and teaching energy psychology methods such as Emotional Freedom Techniques, Tapas Acupressure Technique, Reiki and breathwork to thousands of people. Their research reinforces the idea of a healing and morally self-correcting field of consciousness. This concept is compatible with Rupert Sheldrake's "Morphic Field". The Healing Field illustrates how transpersonal fields of consciousness connect all life forms and provides powerful leverage to heal the vast range of issues not addressed by conventional medicine and therapy. These issues often relate to:

- Contracts made in the womb
- Merged identities
- Problems inherited from ancestors
- Past life traumas
- Near death experiences
- Interactions with deceased persons
- Spirit and entity attachment
- Spiritual experiences
- Encounters with higher order beings

Each section carefully references scientific research, making this book a unique bridge between science and energy healing. Using simple, natural techniques we can heal our emotional and physical issues. In doing so, we contribute towards healing the fields of consciousness that connect us all. The Healing Field provides a reliable roadmap to help you chart a new course towards realizing your full potential in life.

An Indispensable Resource on Advanced Methods of Analysis of Human Skeletal and Dental Remains in Archaeological and Forensic Contexts Now in its third edition, *Biological Anthropology of the Human Skeleton* has become a key reference for bioarchaeologists, human osteologists, and paleopathologists throughout the world. It builds upon basic skills to provide the foundation for advanced scientific analyses of human skeletal remains in cultural, archaeological, and theoretical contexts. This new edition features updated coverage of topics including histomorphometry, dental morphology, stable isotope methods, and ancient DNA, as well as a number of new chapters on paleopathology. It also covers bioarchaeological ethics, taphonomy and the nature of archaeological assemblages, biomechanical analyses of archaeological human skeletons, and more. Fully updated and revised with new material written by leading researchers in the field Includes many case studies to demonstrate application of methods of analysis Offers valuable information on contexts, methods, applications, promises, and pitfalls Covering the latest advanced methods and techniques for analyzing skeletal and dental remains from archaeological discoveries, *Biological Anthropology of the Human Skeleton* is a trusted text for advanced undergraduates, graduate students, and professionals in human osteology, bioarchaeology, and paleopathology.

During the 1970s, the German sculptor Joseph Beuys made a number of trips to Ireland and Scotland. This interdisciplinary study of the artist's work in the "Celtic world" assesses whether the practice shown or developed during these visits could be seen, in any sense, as a language practice - more specifically, as a "language of healing" - and whether Beuys could be said to have interpreted and performed notions of "Celticity" in these places. The book reflects on the anthropological aspect of Beuys' work and includes interview material with artists who worked with or met him during this time. (Series: European Studies in Culture and Policy - Vol. 10)

This book is based on contributions made to an international conference held in the Pontifical Gregorian University and presents reflections of authors from all five continents. The conference was held to acknowledge the fiftieth anniversary of Vatican II, noting that during this time Lonergan was a professor at the Gregorian. The reference to "rediscovering Lonergan" in the title stems from a conviction that there is much in Lonergan's thought that remains relevant to the globalizing world of today and that continues to be important for implementing Vatican II. The reference to anthropology in the title emerges from a conviction that philosophical and theological anthropology is central to the thought of Lonergan and, at the same time, that it is often the "issue underlying the issues" in debates today both within the Church and in society at large. The book has a three-fold structure, which echoes the structure of the conference on which it is based. Part 1 explores the anthropology of Lonergan in depth and the method that emerges from it. Part 2 explores three key areas of application: interreligious dialogue; an interdisciplinary approach to the social sciences; and the ethos of Catholic universities. Part 3 presents short summaries of workshops that were held during the conference, where participants describe how they are implementing Lonergan's method. It concludes with by comments on overlaps between the thought of Lonergan and the pastoral vision of Pope Francis.

This book breaks new ground in that its purpose is to "mainstream" teaching about the environment in higher education. Despite the holistic nature of the content, the book is structured-with two exceptions-around disciplinary chapters. The opening chapter, "Reinventing Higher Education," and the final chapter, "Reinventing the Classroom: Connected Teaching," provide an interdisciplinary frame for the book. Disciplinary chapters include anthropology, biology, economics, geography, history, literature, media and journalism, philosophy, political science, and religion. Each chapter begins with an introduction that asks, "What can the content and methodology of this discipline bring to the study of the environment?" and conversely, "What challenges and opportunities does this material create for teaching basic concepts in this discipline?" Sample plans are presented next, either for course units or for full courses. Material for introductory or lower division courses generally precedes that for advanced or upper division courses. The chapters each conclude with a resources section that includes teaching materials, print and nonprint, and background material for the instructor. (JRH)

As recently as a few decades ago, most people would have described America as a predominantly Protestant nation. Today, we are home to a colorful mix of religious faiths and practices, from a resurgent Catholic Church and a rapidly growing Islam to all forms of Buddhism and many other non-Christian religions. How did this startling transformation take place? A great many factors contributed to this transformation, writes Amanda Porterfield in this engaging look at religion in contemporary America. Religious activism, disillusionment with American culture stemming from the Vietnam war, the influx of Buddhist ideas, a heightened consciousness of gender, and the vastly broadened awareness of non-Christian religions arising from the growth of religious studies programs--all have served to undermine Protestant hegemony in the United States. But the single most important factor, says Porterfield, was the very success of Protestant ways of thinking: emphasis on the individual's relationship with God, tension between spiritual life and religious institutions, egalitarian ideas about spiritual life, and belief in the practical benefits of spirituality. Distrust of religious institutions, for instance, helped fuel a religious counterculture--the tendency to define spiritual truth against the dangers or inadequacies of the surrounding culture--and Protestantism's pragmatic view of spirituality played into the tendency to see the main function of religion as therapeutic. For anyone interested in how and why the American religious landscape has been so dramatically altered in the last forty years, *The Transformation of Religion in America* offers a coherent and persuasive analysis.

This adventure in science and imagination, which the *Medical Tribune* said might herald "a Copernican revolution for the life sciences," leads the reader through unexplored jungles and uncharted aspects of mind to the heart of knowledge. In a first-person narrative of scientific discovery that opens new perspectives on biology, anthropology, and the limits of rationalism, *The Cosmic Serpent* reveals how startlingly different the world around us appears when we open our minds to it.
