Most dictionaries have forerunners, and all have imitators; an understanding of the historical foundations of dictionary-making is therefore one of the preconditions of further progress in academic lexicography. The papers in this volume, which

were presented at the 1986 Exeter Seminar, survey most of the lexicographical traditions in the world, some tracing them right back to their beginnings. The programme was divided into eight sessions, with the following concentrations of topics: (1) three classical traditions, (2) the early history of European lexicography, (3) the beginnings of English lexicography, (4) further aspects of English lexicography, (5) the background of diverse national developments, (6) specific features of national developments, (7) pioneers of three genres, (8) recent trends in the English dictionary.

This volume provides concise, authoritative accounts of the approaches and methodologies of modern lexicography and of the aims and qualities of its end products. Leading scholars and professional lexicographers, from all over the world and representing all the main traditions and perspectives, assess the state of the art in every aspect of research and practice. The book is divided into four parts, reflecting the main types of lexicography. Part I looks at synchronic dictionaries - those for the general public, monolingual dictionaries for second-language learners, and bilingual dictionaries. Part II and III are devoted to the distinctive methodologies and concerns of historical dictionaries and specialist dictionaries respectively, while chapters in Part IV examine specific topics such as description and prescription; the representation of pronunciation; and the practicalities of dictionary production. The book ends with a chronology of major events in the history of lexicography. It will be a valuable resource for students, scholars, and practitioners in the field.

Seminar paper from the year 2015 in the subject English Language and Literature Studies - Linguistics, grade: 1,7, University of Bonn, course: English Words: Structure, History and Usage, language: English, abstract: The history of the English lexicography offers through its numerous works that have survived up to our days a great opportunity to observe not only the semantic development of words, but also their layout in a page, from their fonts' styles and sizes to the structure of their meanings and the later acquisition symbols and abbreviations. Online availability of historical dictionaries enables us to study comparatively and diachronically the curriculum vitae of words, through which we can reconstruct a morpho-semantic overview that links past with present usages and meanings including their semantic development (e.g. polysemy, shifted meanings etc.), spelling variations, etymological suggestions and other valuable pieces of information. In many cases, due to the scientific achievements and rapid changes that occur in the human societies, it is possible to observe how social and cultural changes may have been captured within a particular definition or an etymological explanation. The current study focuses on the analysis of four dictionary entries. How do the meanings of the selected words evolve semantically and what does each lexicographer offer to the reader as we approach modern times? Due to the restricted length available for this paper, the early seventeenth century has been set as starting point for this work; more precisely Robert Cawdrey's Table Alphabeticall (1604), a most well-known work regarded today as the first monolingual English dictionary. A total of ten important dictionaries up to the digital OED will be used. The aim is to demonstrate through a comparative approach what semantic changes have taken place throughout the definitions, what has survived or become obsolete over time and what is the semantic status of today's definitions within the selected headwords.

These substantial volumes present the fullest account yet published of the lexicography of English from its origins in medieval glosses, through its rapid development in the eighteenth century, to a fully-established high-tech industry that is as reliant as ever on learning and scholarship. The history covers dictionaries of English and its national varieties, including American English, with numerous references to developments in Europe and elsewhere which have influenced the course of English lexicography. --from publisher description.

A Sociolinguistic History of British English Lexicography traces the evolution of British English dictionaries from their earliest roots to the end of the 20th century by adopting both sociolinguistic and lexicographical perspectives. It attempts to break out of the limits of the dictionary-ontology paradigm and set British English dictionary making and research against a broader background of socio-cultural observations, thus relating the development of English lexicography to changes in English, accomplishments in English linguistics, social and cultural progress, as well as advances in science and technology. It unfolds a vivid, coherent and complete picture of how English dictionary making develops from its archetype to the prescriptive, the historical, the descriptive and finally to the cognitive model, how it interrelates to the course of the development of a nation's culture and the historical growth of its lexicographical culture, and how English lexicography spreads from British English to other major regional varieties through inheritance, innovation and self-perfection. This volume will be of interest to students and academics of English Lexicography, English Linguistics and world English lexicography.

This comprehensive account of the history of Chinese lexicography is the first book on the subject to be published in English. It traces the development of Chinese lexicography over three millennia, from the Zhou Dynasty (1046 BC-256 BC) to the Qing Dynasty (1616-1911). Revealing how the emergence of lexicographical culture in ancient China was linked to the teaching of ancient characters, it describes the subsequent development of primers, thesauruses, and dictionaries of all major types, including those of dialects and technical terms. These works originated and appeared in ancient China, predating their western counterparts by hundreds of years: and in one form or another most of them remain in use today. Throughout their account the authors show how changes in the organization, content, use and researches of Chinese

lexicographical works reflected broader social and political developments. This book not only makes an important and original contribution to the history of Chinese lexicography and the social and cultural history of China but also provides illuminating insights into world lexicography and new forms of comparative researches in lexicography in the global context.

A dictionary records a language and a cultural world. This global history of lexicography is the first survey of all the dictionaries which humans have made, from the ancient civilizations of Mesopotamia, Egypt, China, India, and the Greco-Roman world, to the contemporary speech communities of every inhabited continent. Their makers included poets and soldiers, saints and courtiers, a scribe in an ancient Egyptian 'house of life' and a Vietnamese queen. Their physical forms include Tamil palm-leaf manuscripts and the dictionary apps which are supporting endangered Australian languages. Through engaging and accessible studies, a diverse team of leading scholars provide fascinating insight into the dictionaries of hundreds of languages, into the imaginative worlds of those who used or observed them, and into a dazzling variety of the literate cultures of humankind.

Lexicographica. Series Maior features monographs and edited volumes on the topics of lexicography and meta-lexicography. Works from the broader domain of lexicology are also included, provided they strengthen the theoretical, methodological and empirical basis of lexicography and meta-lexicography. The almost 150 books published in the series since its founding in 1984 clearly reflect the main themes and developments of the field. The publications focus on aspects of lexicography such as micro- and macrostructure, typology, history of the discipline, and application-oriented lexicographical documentation.
