*Pituitary
disease -
Wikipedia*

The pituitary gland is a tiny organ, the size of a pea, found at the base of the brain. As the “master gland” of the body, it produces many

Read Free The Pituitary Gland

hormones that travel throughout the body, directing certain processes or stimulating other glands to produce other hormones. The pituitary gland makes or stores many different hormones.

Read Free The Pituitary Gland

*Pituitary Gland
/ Hormone Health
Network*

The pituitary gland is often dubbed the “master gland” because its hormones control other parts of the endocrine system, namely the thyroid

Read Free The Pituitary Gland

gland, adrenal glands, ovaries, and testes.

However, the pituitary doesn't entirely run the show. In some cases, the hypothalamus signals the pituitary gland to stimulate or inhibit hormone production.
